### Sequence Diagrams

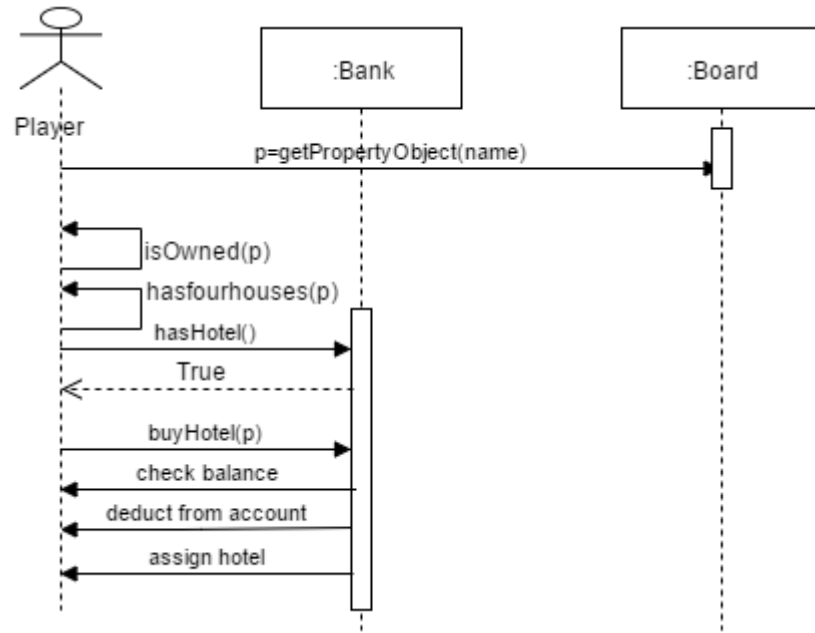

1. Buy Property
2. Pay Rent
3. Build a hotel

#### Buy Property

The player lands on a property. He might choose to buy the property (by clicking the buy property button ) if it is not owned. For that the bank checks if the player has sufficient funds. If he does, the cost of property is deducted from his balance which is initially set at 1500. The property is added to player's ownedProperty set and player is set as the owner of the property.

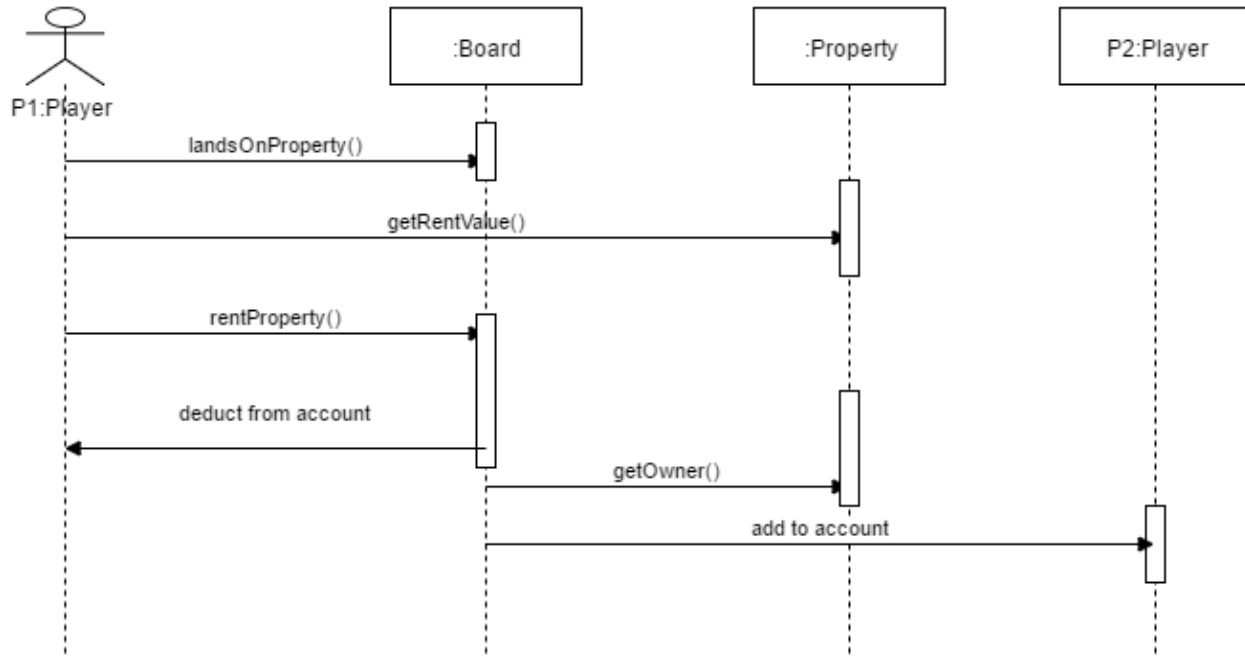

## Buy a Hotel

A player is allowed to build a hotel on his owned property if he already has 4 houses built on that property.

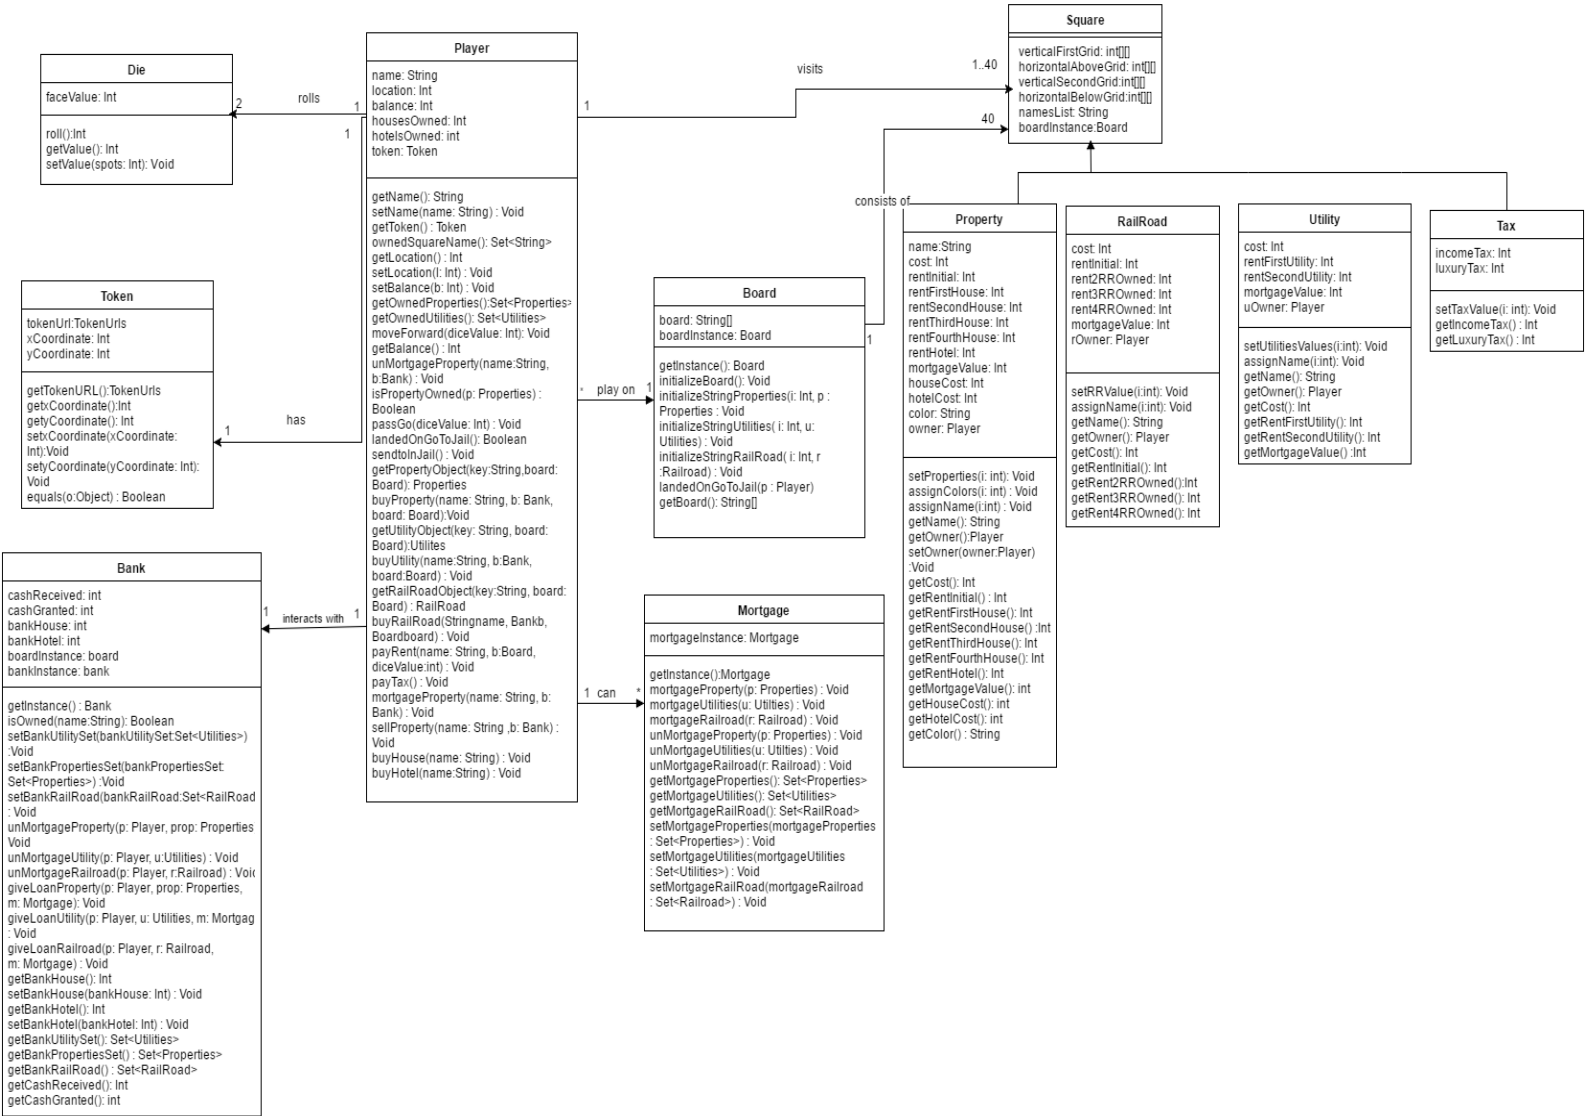

So for this, it is first checked if the player owns the property, and has four houses on it already. If this information is true, the bank sells a hotel to the player after checking if player has sufficient balance to do so. The cost of house is deducted by the bank from the player's balance.

## Pay Rent

If a player lands on another player's property, rent is gotten from the property/utility/railroad class for that property/utility/railroad. Rent is paid via the `payRent()` function, and rent is deducted from player's balance added to the owner's balance.

Design Class Diagram

## Glossary

### Class Description

Class Name	Attributes	Description
Bank	cashReceived,cashGranted,bankHouse,bankHotel,boardInstance,bankInstance	Class which owns all properties initially. Players interact with the bank class to buy/ sell/ mortgage properties or to take loan

## Association Description

Name	Source	Destination	Description
Can	Player	Mortgage	A player can mortgage property
Consists of	Board	Square	A board consists of 40 squares.
Has	Player	Token	Each player in the game is identified by a token.
Interacts with	Player	Bank	Player interacts with bank to buy/ sell/ mortgage properties or to take loan.
Play on	Player	Board	Many players play on one board
Rolls	Player	Die	Each player rolls two die.
Visits	Player	Square	Based on the number on dice,player visits a square.

## System Test Cases

S.No	Test Case Name	Description	How to run	Expected	Actual	Result
1	Start Test	To check if the user is able to start game when start game is clicked	The user launches the game , enters the number of desired player number and name	After clicking on Start , the game should starts and a screen with monopoly board should appear , the chance is given to the first player	The game starts, a screen appears with the monopoly board on it.	Pass
2	Roll Dice test	This check that when roll dice is clicked, two random values on the dice should be generated.	The player on his chance clicks on the roll dice.	Random number should be generated on the two dices, and token of player moves accordingly.	Random number is generated on two dices and token of player moves accordingly	Pass
3	Continue Test	To test by clicking continue the chance is given to the other player	The player clicks on continue button the UI	After Clicking on continue the chance should be transferred to next player	After clicking on continue the chance is transferred to next player	Pass
4	Buy Property Test	To check if a player is able to buy a certain property, if it is not owned by someone	During the play the player lands on a property which is not owned by any other player and the player clicks on the Buy Property	The player should be able to buy the property, the cost of property should be reduced from the player balance	The player is able to buy the property, the cost of property is reduced from the player balance	Pass
5	Build Property	To check if a player is able to build a house on a owned property	During the play the player lands on a property which is owned by himself and he wants to build a house on it.	The player should be able to build a house on the property he owns, the amount of house should be reduced from the players balance	The player is able to build a house on the property he owns, the amount of house is reduced from the players balance	Pass
6	Mortgage Property	The player is able to mortgage property to the bank	During the play the player lands on a property which is owned by himself and he wants to mortgage it.	The player should be able to mortgage the desired property , the mortgage value of the property should be added to player's balance	The player is able to mortgage the desired property , the mortgage value of the property is added to player's balance	Pass
7	End Game	The player is able to end the game	The Player wants to end the game and clicks on exit game	The player should be able to exit game and final screen should appears showing the current balance of all the other players and properties owned by them	The player is able to exit game and final screen appears showing the current balance of all the other players and properties owned by them	Pass

Running the game:

PlayerDetails.java class contains the main method. In order to run the game you have to sun this class. It will start with a screen which asks for the user details. After each screen is passed by entering the valid information, the game is started.
